Co-funded by the European Union

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the Youth and Lifelong Learning Foundation (INEDIVIM). Neither the European Union nor the granting authority can be held responsible for them.

Introduction

One of the central aims of VibeSync is to strengthen participants' capacity to collaboratively design and implement youth-oriented initiatives.
Participants work in transnational teams to develop ideas, tools, and small-scale project concepts.

Understanding Co-Creation

Co-creation means developing an idea or solution collectively.
Participants are not simply consulted after decisions have been made.
They are involved throughout the process of identifying challenges, developing ideas, making decisions, and shaping outcomes.

Shared Ownership

When people contribute meaningfully to an idea, they are more likely to feel responsible for its success. VibeSync deliberately promotes shared ownership of outcomes.

Project ideas therefore become something created by the team rather than delivered to the team.

Starting with a Real Challenge

Good project ideas begin with understanding a real need or challenge.
VibeSync includes a brainstorming session where participants identify youth challenges at local and EU level.
This ensures that project ideas respond to actual issues rather than being created without context.

Exploring Local Challenges

Local communities may face different challenges.
Young people may experience barriers related to participation, employment, inclusion, digital access, or sustainability.
Understanding the local context helps teams design initiatives that are relevant and realistic.

Connecting Local and European Perspectives

VibeSync asks participants to consider challenges at both local and European levels. This allows teams to recognise that some issues may appear differently across countries but still share common European dimensions.

Brainstorming

Brainstorming allows participants to generate many ideas before choosing one direction.

During this stage, creativity is more important than immediate perfection.

Participants can build on one another's suggestions and discover possibilities they might not have considered individually.

From Ideas to Concepts

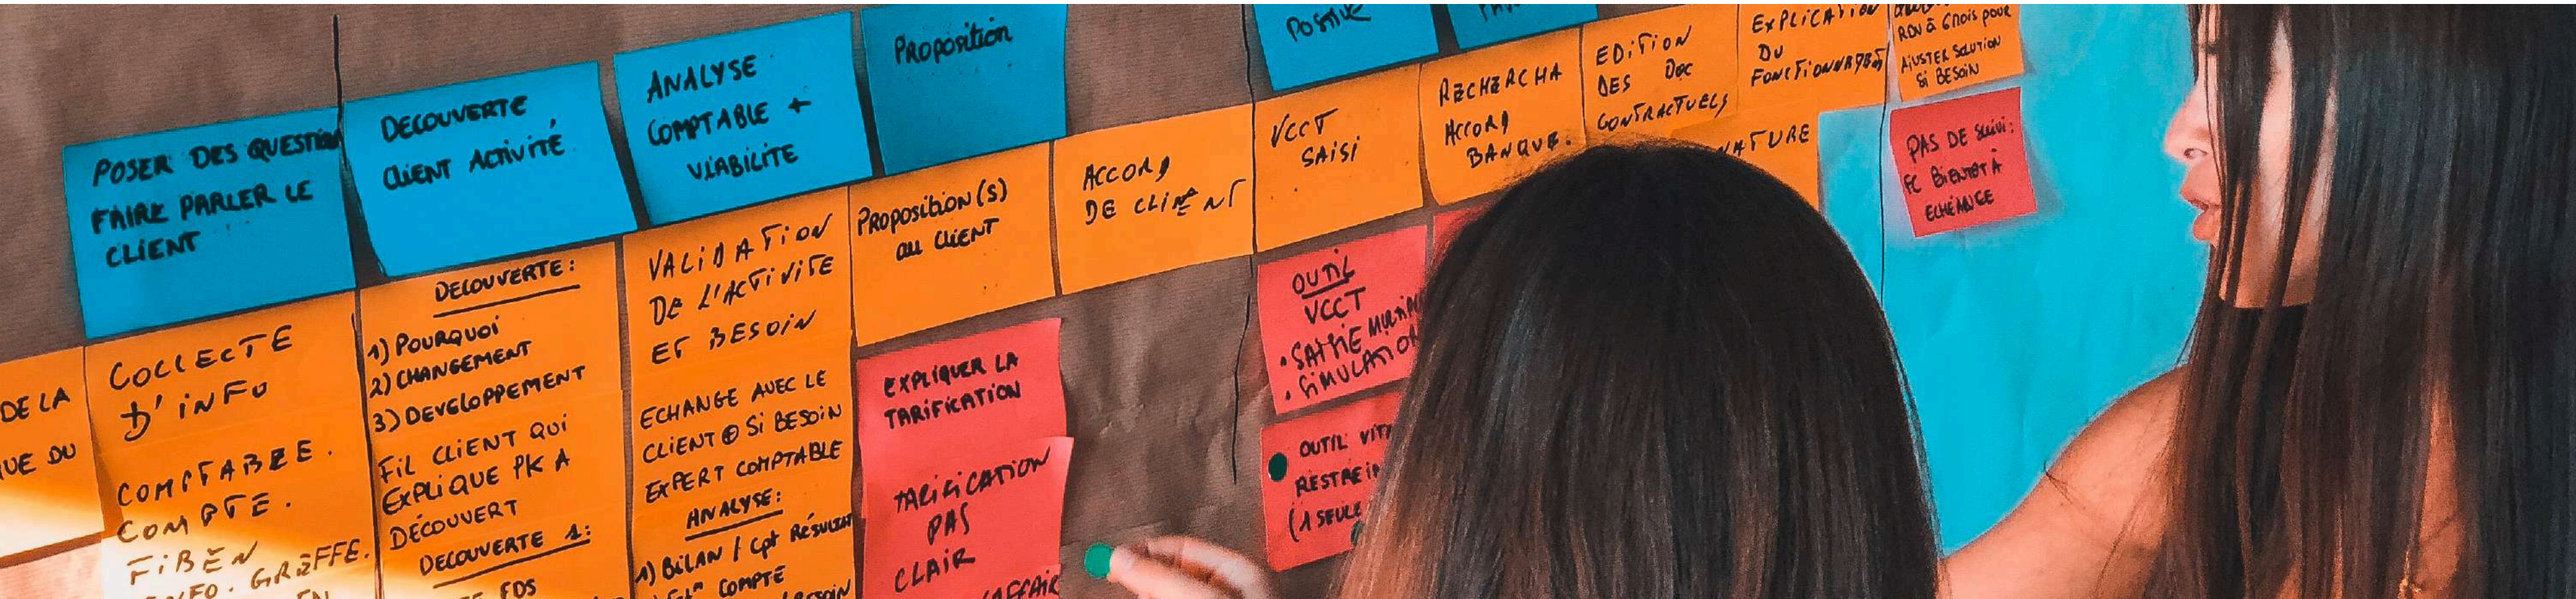
An idea becomes stronger when the team begins to define it.
Who is the initiative for?
What problem does it address?
What would participants do?
What change should it create?
These questions help transform an initial idea into a project concept.

Transnational Teams

VibeSync forms transnational teams for idea development.
This means participants develop initiatives with people from different countries and backgrounds.
Different experiences can challenge assumptions and help teams create more adaptable and inclusive ideas.

Creativity in Youth Work

Creativity allows youth workers to explore new approaches to familiar challenges.
It may involve adapting existing methods, combining different ideas, or designing completely new activities.
VibeSync encourages creativity and innovation as part of the co-creation process.



Designing Youth-Oriented Initiatives

Youth-oriented projects should respond to the realities and interests of young people.

Participants therefore need to think about who will take part, how young people will be involved, and what value the activity will create for them.

The project should be designed with participation in mind, not only implementation.

Integrating European Values

The VibeSync mini-project concepts are expected to integrate European values.
This means participants should consider principles such as inclusion, equality, participation, solidarity, and respect for diversity while designing their initiatives.

Integrating Digital Tools

Project concepts also include the use of digital tools. Participants can consider how technology might support communication, participation, collaboration, learning, or dissemination.

Digital tools should contribute to the objective rather than being added without purpose.

Integrating Green Practices

The third dimension integrated into VibeSync mini-projects is green practice.

Participants are encouraged to consider sustainability while planning activities and making project decisions.

This connects environmental responsibility directly with project development.

Building a Mini-Project Concept

VibeSync does not require participants to develop large, complex projects. Instead, they design small-scale project concepts. This makes the learning process realistic and allows teams to focus on developing clear objectives, activities, and practical implementation possibilities.

Presenting Project Ideas

VibeSync does not treat digital collaboration as a replacement for face-to-face youth work.
The mobility aims to strengthen participants' ability to collaborate both physically and in digital environments.
The strongest approach is often to combine both.

Peer Feedback

VibeSync includes structured peer feedback after the project presentations. Feedback allows teams to identify strengths, potential weaknesses, and new possibilities. It reinforces the idea that project development is iterative rather than finished after the first draft.

From Concept to Implementation

The programme includes discussion about real-life implementation possibilities. Participants therefore move beyond imagining an initiative and begin considering how it could realistically be transferred into their organisations or communities.
